

Understanding how mymobility® can help before and after surgery

mymobility® with Apple Watch® is designed to provide you with the information you need to prepare before and after your treatment*.

This brochure will explain the app and how it can work with your care team to provide helpful reminders, progress reports and support that's unique to you. It's a personalised way to keep you moving and connected.

*mymobility can only be used with certain iPhone and Android devices

Zimmer Biomet is not providing medical advice. This brochure is for educational purposes only and is intended for use by Health Care Professionals to aid, facilitate and manage discussions with patients about their health care. The information contained in this brochure is to serve as a general guide only and is not intended to replace the advice given from a Health Care Professional. If you require medical advice or wish to discuss your medical concerns, seek guidance from your Health Care Professional. Consult your Health Care Professional about any medications, supplements or treatments you are considering and when seeking treatment, disclose all medications you are taking or treatments you are receiving. If required, as part of your treatment and rehabilitation program, your Health Care Professional will tailor an exercise and/or dietary plan specifically designed to meet your individual needs.

Patients must have a supported iPhone or Android device to use mymobility. Apple Watch is a registered trademark of Apple, Inc. Android is a trademark of Google LLC. mymobility® with Apple Watch®

by  ZIMMER BIOMET

Not actual patients. All patients are candidates.

What is mymobility®?

mymobility® is a digital interactive care plan designed in the form of a mobile application made for an iPhone and Android. The application prompts and encourages users to complete tasks assigned by their surgeon, as part of the surgeon's care plan.

Before and After Surgery

Timely education, to-do lists and reminder notifications

Your care team will select an appropriate care plan for you that is designed to help you before and after surgery.

Remote Monitoring

Encrypted messaging will allow you to send videos, pictures and/or text messages to your surgeon and care team without the need for an appointment.

Exercise Tutorials

After surgery, your surgeon will likely assign daily exercises aimed at regaining movement. Your surgeon may assign easy to follow video-guided exercises.

This allows you to perform the exercises in the comfort of your own home while your surgeon and care team track progress remotely.

Data Collection

Data about your activity levels and progress with your care plan is supplied to your surgeon and care team to help them determine your need for extra direction or follow-up care. After your surgery, they will also be able to review data to aid in your recovery process

Summary

We hope that this brochure has helped you to understand mymobility®. This brochure is intended to explain how the mymobility® program works by allowing care teams to track progress through the care plans created to prepare you before and after surgery.
